Priority number(s):

Abstract of JP58201752

NEW MATERIAL: The compound of formula I (Rf is 3-18C fluorinated aliphatic group; Z is -SO₂-, -CO-, -(CH₂)_n-SO₂- (n is 1-6), etc.; R₁ is H, -CH₂CH₂OH, 1-12C alkyl, etc.; Q₁ is -(CH₂)_n- (n is 2-6), etc.; X is inorganic or organic anion; m₁-m₃ are 1-3; M₁-M₃ are H, or inorganic or organic cation).
EXAMPLE: The compound of formula II.

USE: A surface active agent having excellent surface tension lowering activity, frothing property, resistance to hard water, and solubility.

PROCESS: The compound of formula I wherein X is Cl, Br or I can be prepared by reacting the compound of formula III with the compound of formula IV (X' is Cl, Br or I) in the presence of a basic catalyst (in the case of m₁=m₂=m₃) or by reacting 1mol of the compound of formula III with 2.0-2.4mol of the compound of formula V and further reacting with 1.0-1.2mol of the compound of formula VI (in the case of m₁=m₂ not equal to m₃).
